

## Complex Systems: Errata and Changes

Dimitry Nabutovsky, Tal Grossman, and Eytan Domany, “Learning by CHIR without Storing Internal Representations,” volume 4, pages 519–541

Equation (2.5) on page 525 should read

$$p_i = \frac{\theta(W_i S_i S) e^{-\beta |X_i|}}{\sum_j \theta(W_j S_j S) e^{-\beta |X_j|}}$$

The inequality in the sentence in the middle of page 534 should be reversed to read “In the single-output version unit  $i$  was accepted as a candidate for flipping if the condition  $W_i S_i S > 0$  was satisfied.”

Since our computer codes *did not* contain these errors, none of our published results needs to be modified.

We would also like to acknowledge useful discussions with S. Barkan and D. Saad, and the partial support of this research by a grant from Minerva.
